

Operating Systems

COURSE SYLLABUS

Code and name of specialty	122 – Computer Science	Institute	Computer Sciences and Software Engineering
Program name	Computer Science and Intelligent Systems	Department	Software Engineering and Management Information Technologies
Type of program	Educational and Professional	Language of instruction	Ukrainian, English

LECTURER

Smolin Pavlo

Pavel.Smolin@khpi.edu.eu

Senior Lecturer of Software Engineering and Management Information Technologies Department. Prepared and published 14 research papers and textbooks (h-index = 1, i10-index = 0, Google Scholar - <https://scholar.google.com/citations?user=zCHB-xoAAAAJ&hl%20google%20scholar>; ORCID-<https://orcid.org/0000-0002-1290-9698>, Scopus - <https://www.scopus.com/authid/detail.uri?authorId=57211429421>).

Leading lecturer of the courses: *Operating System (Bachelors, Ukrainian and English), Computer architecture fundamentals and operating systems (Bachelors, Ukrainian and English)*

GENERAL DESCRIPTION OF THE COURSE

Summary	The course “Operating System” is a course in the cycle of professional compulsory training of the specialty 122 “Computer Science and Intelligent Systems”. It is taught in the second semester in the amount of 120 hours (4 ECTS credits), in particular: lectures – 32 hours, laboratory classes – 32 hours, independent work – 56 hours. The course includes two content modules and one tests. The study of the discipline ends with the test		
Course objectives	Assimilation of theoretical bases of construction, principles of design, configuration and application of various modern operating systems which provide the organization of computer processes in corporate information systems and practical application of system calls in software applications		
Types of classes and control	Lectures, laboratory works, control works, self-study. The course ends with a final test		
Term	2		

Student workload (credits) / Type of course	4 / Mandatory	Lectures (hours)	32	Workshops (hours)	32	Self-study (hours)	56
--	---------------	-------------------------	----	--------------------------	----	---------------------------	----

Program competences	<p>GC1. Ability to abstract thinking, analysis and synthesis.</p> <p>GC2. Ability to apply knowledge in practical situations.</p> <p>GC3. Knowledge and understanding of the subject area and understanding of professional activity.</p> <p>GC6. Ability to learn and master modern knowledge.</p> <p>PC12. Ability to ensure the organization of computational processes in information systems of various purposes, taking into account the architecture, configuration, performance indicators of operating systems and system software.</p>
----------------------------	--

PC14. Ability to apply methods and tools of information security, to develop and operate special software for security of information resources of critical information infrastructure.

Learning outcomes	Teaching and learning methods	Forms of assessment (continuous assessment CAS, final assessment FAS)
PLO13. Know the system programming languages and methods for the software development that interacts with the components of computer systems, know network technologies, computer network architectures, have practical skills in administration technology of computer networks and their software.	Interactive lectures with presentations, discussions, practical classes, teamwork, case method, research, project training	Written individual assignments for laboratory work (CAS), assessment of knowledge in laboratory classes (CAS), express surveys (CAS), online tests (CAS), final / semester control in the form of a semester test, according to the learning process schedule (FAS)
PLO15. Understand the concept of information security, the principles of secure software design, ensure the security of computer networks in conditions of incomplete and uncertain input data.	Interactive lectures with presentations, discussions, practical classes, teamwork, case method, research, problem-based learning	Written individual assignments for laboratory work (CAS), assessment of knowledge in laboratory classes (CAS), express surveys (CAS), online tests (CAS), final / semester control in the form of a semester test, according to the learning process schedule (FAS)

ASSESSMENT AND GRADING

Ranges of points corresponding to grades	Total score (points) for all types of learning activities	ECTS grading scale	The national grading scale	Allocation of grade points
	90-100	A	excellent	
	82-89	B	good	
	74-81	C		
	64-73	D	satisfactory	
	60-63	E		
	35-59	FX	Unsatisfactory (with the exam retake option)	
	0-34	F	Unsatisfactory (with mandatory repetition of the course)	

100% **final assessment** in the form of test (20%) and current assessment (80%).
 20% **exam**: semester test, according to the schedule of the educational process
 80% **continuous assessment**:
 • 70% assessment of tasks in laboratory work;
 • 10% intermediate control (1 control works)

Course policy

Follow the rules of the University internal regulations. Take an active part in the learning process. Students must attend all classes according to the study schedule and adhere to the norms of academic ethics. To study the course, students need to have their personal computer and (or) use computers of the computer center at the department. Students must work with compulsory and recommended reading, including Internet resources. Students must complete and submit all laboratory works during the semester in which the course is taught, before the examination session. The final assessment is not carried out without the personal presence of students.

COURSE STRUCTURE AND CONTENT

Topic 1	Operating system architecture	Laboratory work 1	Initial information about working with Linux. Working with files in UNIX / Linux	Self-Study	Individual work Individual calculation task.
Topic 2	Processes and threads management	Laboratory work 2	Creating and compiling programs in Linux		

Topic 3	Processes and threads planning	Laboratory work 3	Transfer command line parameters to the program. Working with processes. Obtaining system information.		Studying the topics of the course with the help of recommended literature, homework
Topic 4	Communication of threads	Laboratory work 4	Background processes and signals		
Topic 5	Interprocess Communication	Laboratory work 5	Application of thread		
Topic 6	Memory Management	Laboratory work 6	Linux API - introduction to interprocess interaction. Channels.		
Topic 7	Control of I/O devices	Laboratory work 7	Linux AP - introduction to interprocess interaction. Sockets		
Topic 8	File system	Laboratory work 8			
Topic 9	Network, multiprocessor operating systems and information security	Laboratory work 9

ACADEMIC INTEGRITY

Students are expected to adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI".

The content of this syllabus is consistent with the course program.
