

Syllabus Course Program

Algorithms and data structures

Specialty

122 – Computer Science

Institute

Institute of Computer Science and Information Technology

Educational program

Computer Science and Intelligent Systems

Department

Software Engineering and Management Intelligent Technologies (321)

Level of education

Bachelor's level

Course type

Special (professional), Mandatory

Semester

2

Language of instruction

English, Ukrainian

Lecturers and course developers

Andrii Kopp

andrii.kopp@khpi.edu.ua

Doctor of Philosophy (Ph.D.), Associate Professor, Associate Professor of Software Engineering and Management Intelligent Technologies Department

General information

Summary

The course “Algorithms and Data Structures” is a course in the cycle of professional compulsory training of the specialty 122 “Computer Science”. It is taught in the second semester in the amount of 120 hours (4 ECTS credits), in particular: lectures – 28 hours, laboratory classes – 28 hours, self-study work – 64 hours. The course includes two modules and two modular tests. The study of the discipline ends with the test.

Course objectives and goals

This course objective is formation of students' knowledge of basic data structures and algorithms as well as the acquisition of practical skills in the analysis of algorithms.

Format of classes

Lectures, laboratory classes, self-study work (and individual calculation work). Final assessment – test.

Competencies

GC1. Ability to think abstractly, analyze and synthesize.

GC2. Ability to apply knowledge in practical situations.

GC3. Knowledge and understanding of the subject area and understanding of professional activities.

GC6. Ability to learn and master modern knowledge.

GC7. Ability to search, process and analyze information from various sources.

PC3. Ability to think logically, build logical conclusions, use formal languages and models of algorithmic computing, design, develop and analyze algorithms, evaluate their effectiveness and complexity, solvability and intractability of algorithmic problems for adequate modeling of subject areas and creation of software and information systems.

PC8. Ability to design and develop software using various programming paradigms: generalized, object-oriented, functional, logical, with appropriate models, methods and algorithms of computation, data structures and control mechanisms.

Learning outcomes

PLO1. To apply knowledge of the basic forms and laws of abstract and logical thinking, the basics of the methodology of scientific knowledge, forms and methods of extracting, analyzing, processing and synthesizing information in the subject area of computer science.

PLO5. Design, develop and analyze algorithms for solving computational and logical problems, evaluate the effectiveness and complexity of algorithms based on the use of formal models of algorithms and computable functions.

Student workload

The total volume of the course is 120 hours (4 ECTS credits): lectures - 28 hours, laboratory classes - 28 hours, self-study - 64 hours.

Course prerequisites

Higher mathematics

Algorithmization and programming

Fundamentals of computer science and artificial intelligence methods

Features of the course, teaching and learning methods, and technologies

Teaching and learning methods:

interactive lectures with presentations, discussions, laboratory classes, teamwork, case method, student feedback, problem-based learning.

Forms of assessment:

written individual assignments for laboratory work (CAS), assessment of knowledge in laboratory classes (CAS), express surveys (CAS), online tests (CAS), final/semester control in the form of a semester exam, according to the schedule of the educational process (FAS).

Program of the course

Topics of the lectures

Topic 1. Introduction to data structures and algorithms

Topic 2. Basic data structures

Topic 3. Sorting, merging, and search

Topic 4. Combinatorial algorithms

Topic 5. Fundamental graph algorithms

Topic 6. Geometrical algorithms

Topic 7. Cryptographic algorithms

Topic 8. Approximation algorithms

Topic 9. Mathematical foundations of algorithm analysis

Topic 10. Recursion

Topic 11. Algorithmic strategies

Topic 12. Basics of computability theory

Topic 13. Classes P and NP

Topics of the workshops

Workshops are not provided within the discipline.

Topics of the laboratory classes

Topic 1. Basic data structures (list, queue, stack)

Topic 2. Basic data structures. Hash tables

Topic 3. Basic data structures. Red-black trees

Topic 4. Sorting algorithms

Topic 5. Combinatorial algorithms

Topic 6. Fundamental algorithms on graphs and trees

Topic 7. Geometrical algorithms

Topic 8. Dynamic programming

Topic 9. Greedy algorithms

Self-study

The individual calculation work is provided in the curriculum.

Students are recommended with additional materials (videos, articles) for self-study and processing.

Assessment and grading

Criteria for assessment of student performance, and the final score structure

100% Final assessment as a result of Final test (30%) and Continuous assessment (70%).
30% Final test
70% Continuous assessment:
- Laboratory classes (18%)
- Calculation work (22%)
- Two module tests (30%)

Grading scale

Total points	National	ECTS
90-100	Excellent	A
82-89	Good	B
75-81	Good	C
64-74	Satisfactory	D
60-63	Satisfactory	E
35-59	Unsatisfactory (requires additional learning)	FX
1-34	Unsatisfactory (requires repetition of the course)	F

Norms of academic integrity and course policy

The student must adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI": to demonstrate discipline, good manners, kindness, honesty, and responsibility. Conflict situations should be openly discussed in academic groups with a lecturer, and if it is impossible to resolve the conflict, they should be brought to the attention of the Institute's management.

Regulatory and legal documents related to the implementation of the principles of academic integrity at NTU "KhPI" are available on the website: <http://blogs.kpi.kharkov.ua/v2/nv/akademichna-dobrochesnist/>
