

Syllabus Course Program

Modernization of Electrical Part Of Stations And Substations

Specialty

141 – Electric Power Engineering, Electrical Engineering and Electromechanics

Institute

Institute of Education and Science in Power Engineering, Electronics and Electromechanics

Educational program

Electrical Power Engineering. Electric Power Stations,
Electrical Power Engineering. Energy Management and Energy-Efficient Technologies

Department

Electric Power Stations (130)

Level of education

Bachelor's level

Course type

Special (professional), Optional

Semester

8

Language of instruction

English

Lecturers and course developers

Shokarov Dmytro

Dmytro.Shokarov@khpi.edu.ua

PhD, Associate Professor, Associate Professor of the Department Electric Power Stations

Author of more than 90 scientific, educational, and methodological publications. Leading lecturer of the disciplines: " Power Plant Dispatching and SCADA", " Electrical Part Of Stations And Substations ", " Power Supply Systems", "Modernization of Electrical Part Of Stations And Substations".

[More about the lecturer on the department's website](#)

Andrii Ivakhnov

andrii.ivakhnov@khpi.edu.ua

Assistant at Electrical Power Stations department

Author and co-author of more than 45 scientific and methodological works. Courses: "Energy Storage Systems and Maneuvering at Power Grid", "Modern Technologies of Electricity Generation", "Accounting and Measurement of Parameters of Energy Resources", "Renewable Energy Systems and Secondary Energy Resources", "Modeling of Processes in the Energy Sector", "Modernization of Electrical Part Of Stations And Substations".

General information

Summary

Power stations and substations are the main elements of the energy system and ensure the production and distribution of electricity. The discipline is dedicated to the study of technological and electrical

schemes of various types of power stations, the main electrical equipment and the principles of its operation.

In the theoretical part of the discipline, the issue of electricity generation technology at various types of stations, the role and place of power stations and substations in the energy system is considered. The peculiarities of electrical schemes of various types of stations, their requirements, the process and stages of designing the electrical part of stations and substations are studied. Modes and principles of operation, designs of the main electrical equipment of stations and substations are studied.

The practical part of the discipline is devoted to the development of the electrical part of the station/substation and the design of its complete schematic diagram.

Course objectives and goals

Goal.

Study of the structure and principle of operation of electrical equipment, study of electrical connection schemes of power plants and substations, and formation of abilities and skills in choosing the conditions of their operation as part of the electric power system.

Electrical part of stations and substations

Objectives.

Know:

- Technological schemes of electric stations;
- Schemes and main electrical and communication equipment of electrical stations and substations;
- Normative documents on electrical equipment and schemes of distribution devices;
- Basic modes of operation of the equipment of electrical stations and substations;
- Physical phenomena and processes in electric power plants.

Be able:

- Analyze the operation of electrical connection schemes of power plants and substations in normal and emergency modes;
- Prepare output data for calculating short-circuit modes using specialized computer programs;
- Apply and operate electrical equipment of electrical stations and substations;
- Analyze technical information on electrical equipment, electrical connection diagrams of electrical stations and substations;
- Work on projects of electrical stations and substations;
- Graphically display schemes of distribution devices;
- Choose the main electrical and switching equipment of electrical stations and substations..

Format of classes

Lectures, practical studies, laboratory studies, consultations, self-study. Final control – exam.

Competencies

GC 7. Skills of using information and communication technologies.

GC 9. Ability to search, process and analyze information from various sources

PC 1. Ability to use computer-aided design (CAD), manufacturing (CAM) and engineering calculations (CAE) and related application software packages.

PC 21. Receipt and use of professional knowledge and understanding related to the information protection of power systems with the use of modern information and computer technologies.

Learning outcomes

PRT 1. To find the necessary information in the information space.

PRT 30. To improve the skills of working with modern equipment and software when performing calculations of operating modes of electrical, electrical and electromechanical equipment, corresponding complexes and systems

Student workload

The total volume of the course is 120 hours (4 ECTS credits):

Full-time: lectures - 30 hours, practical classes (workshops) – 20 hours, self-study - 70 hours.

Part-time: lectures - 6 hours, practical classes (workshops) – 4 hours, self-study - 110 hours.

Course prerequisites

Theoretical Foundations of Electrical Engineering, Electrical Systems and Networks

Features of the course, teaching and learning methods, and technologies

Lectures are conducted interactively using multimedia technologies. At workshops and laboratory classes, the skills of student work formatting, the ability to use the university educational platform and resources are practiced. Practical tasks are performed using open-source software or on the Microsoft 365 platform. Learning materials are available to students through the OneNote Class Notebook.

Program of the course

Topics of the lectures

Objectives of the discipline

The value of this discipline for other professional disciplines. The amount of educational material, types of classes and organization of training.

Content module 1.

Topic 1. Classification of electricity consumers – 2 hours

The main components of the power supply system. Characteristic features of the electric power industry. Electrical receivers of electrical energy and their separation by nature, type of current, duration of operation, etc.

Topic 2. Types of main connection diagrams of power plants and substations and their main elements

The main schemes of stations and substations, their main elements. Electricity output from hydroelectric power plants, nuclear power plants and thermal power plants. Graphical symbols of elements of power plants and substations.

Topic 3. Measuring current and voltage transformers

Structural, functional features of current and voltage transformers. Accuracy classes. Measurement errors. Application and role in the operation of power plants and substations.

Content module 2.

Topic 4. Power transformers

Methods for determining the design load of transformers. Basic structural properties and functionality. Determination of the number and capacity of transformers at the substation. Voltage regulation.

Topic 5. Autotransformers

Single-phase and three-phase three-winding autotransformers. Feeding, transformer and electrical power. Characteristic modes of operation of three-phase three-winding autotransformers and voltage regulation.

Content module 3.

Topic 6. Neutral modes in electrical networks

Networks with isolated neutral, networks with resonant-grounded (compensated) neutral: vector diagrams of currents and voltages. Compensation of capacitive currents. Networks with efficiently and solidly grounded neutrals: field of use, working conditions. Advantages and disadvantages.

Topic 7. Short circuits in electrical networks

Types, causes and consequences of short circuits in electrical systems. Electrodynamics and thermal stability of conductors and apparatus with respect to the action of short-circuit currents

Topics of the workshops

Topic 1. Electric power system and its components

Topic 2. Classification of electricity consumers.

Topic 3. Types of main connection diagrams of power plants and substations and their main elements.

Topic 4. Measuring Current and Voltage Transformers

Topic 5. Power Transformers

Topic 6. Autotransformers

Topics of the laboratory classes

not

Self-study

Individual calculation work on the electrical part of the station" in the amount of 20-30 p.

Submission deadline: 16th week.

The work should contain sections on the selection of the structural diagram of the electrical station in accordance with the task, the selection of switchgear schemes and the power supply scheme of the station's own needs, as well as the calculation of short-circuit currents and the selection of main equipment.

A complete schematic diagram of the station and a section of the switchgear cell are attached to the explanatory note of the calculation work. Work design, protection and graphic materials are evaluated.

Coursework

The educational component of "Electrical Part Of Power Stations And Substations" involves the performance of calculation work (C). The results of calculations are drawn up in a written report. The term of defense of the coursework is the 16th week.

Course materials and recommended reading

Compulsory.

1. EPRI-RP3098-01, An Assessment of Distribution System Power Quality.
2. A. McEachern, "Roles of Intelligent Systems in Power Quality Monitoring: Past, Present, and Future," Conference Record, Power Engineering Society Summer Meeting, 2001, Vol. 2, pp. 1103–1105.
3. R. P. Bingham, "Recent Advancements in Monitoring the Quality of the Supply," Power Engineering Society Summer Meeting, 2001, Vol. 2, pp. 1106–1109.
4. Dranetz Engineering Laboratories, "Series 606 Power-Line Disturbance Analyzer," December 1975.
5. E. W. Gunther, J. Rossman, "Application of Advanced Characterization Algorithms, UCA and Internet Communications Technology at the Point of Power Quantity and Quality Measurement," Conference Proceedings of EPRI PQA 1999.
6. IEEE Standard 141-1993: Recommended Practice for Power Distribution in Industrial Plants.
7. IEEE Standard 519-1992: Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems.

5. IEEE Standard 1159-1995, Recommended Practice on Monitoring Electric Power.

6. Draft Standard IEC 61000-4-30 77A/356/CDV, Power Quality Measurement Methods.

7. IEEE Draft Standard P1159.3, Recommended Practice for a Power Quality Data Interchange Format—An Extensible File Format

Assessment and grading

Criteria for assessment of student performance, and the final score structure

Final score consists of up to:

30 points for two module tests,

30 points for laboratory classes and workshops tasks,

20 points for coursework, and

20 points for final tests.

Coursework defense is mandatory.

Grading scale

Total points	National	ECTS
90–100	Excellent	A
82–89	Good	B
75–81	Good	C
64–74	Satisfactory	D
60–63	Satisfactory	E
35–59	Unsatisfactory (requires additional learning)	FX
1–34	Unsatisfactory (requires repetition of the course)	F

Norms of academic integrity and course policy

The student must adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI": to demonstrate discipline, good manners, kindness, honesty, and responsibility. Conflict situations should be openly discussed in academic groups with a lecturer, and if it is impossible to resolve the conflict, they should be brought to the attention of the Institute's management.

Regulatory and legal documents related to the implementation of the principles of academic integrity at NTU "KhPI" are available on the website: <http://blogs.kpi.kharkov.ua/v2/nv/akademichna-dobrochesnist/>
