REVIEW

of the educational program "System Analysis and Control"
for the training of bachelors of "Information Technologies"
in speciality F4 "Systems Analysis and Data Science"
at the National Technical University "Kharkiv Polytechnic Institute"

The educational program "System Analysis and Control" implemented at the National Technical University "Kharkiv Polytechnic Institute" in the speciality F4 "System Analysis and Data Science" is a streamlined document developed and approved by a higher education institution taking into account the requirements of the labor market to the speciality.

The educational program regulates the requirements for the level of education of applicants, the list of disciplines and the logical sequence of their study, the number of ECTS credits required for this program, as well as general and professional competencies and program learning outcomes, that a bachelor of systems analysis is expected to be master of.

The program is composed logically. It defines the field of application, the main focus and features of the program, the place of individual disciplines of general and special training in the structure of the educational program, as well as the list of disciplines included in the selective packages of specialized training and the list of free choice disciplines of professional training. The disciplines, which are listed in the educational program, reflect current topics and areas in the field of knowledge "Information Technologies".

To summarize, I believe that the peer-reviewed educational program "System Analysis and Control" can be recommended for the training of bachelors in the speciality F4 "Systems Analysis and Data Science".
