**Features of the course, teaching and learning methods, and technologies**

Problem-based lectures are one of the most important elements of problem-based learning for students. Along with the consideration of the main lecture material, they provide for the establishment and consideration of a range of problematic issues of a debatable nature, which are not sufficiently developed in science and are of actual importance for theory and practice. Lectures of a problematic nature are distinguished by an in-depth argumentation of the taught material. They contribute to the formation of independent creative thinking in students, instill cognitive skills in them. Students become participants in scientific research and problem solving.

Discussions involve the exchange of opinions and views of participants on a given topic (issue), and also develop thinking, help form views and beliefs, develop the ability to formulate opinions and express them, teach to evaluate other people's proposals, to critically approach one's own views.

The case method is a method of analyzing specific situations, which makes it possible to bring the learning process closer to the real practical activities of specialists and involves consideration of problem situations in the process of studying educational material.

Presentations are speeches in front of an audience, used to present certain achievements, the results of the group's work, a report on the completion of individual tasks, project works. Presentations can be both individual, for example, the speech of one listener, and collective, that is, the speech of two or more listeners.
