Syllabus
Course Program

Deep learning methods

Specialty
113 Applied mathematics

Institute
Educational and Scientific Institute of Computer Science and Information Technology

Educational program
Intelligent Data Analysis

Department
Computer Mathematics and Data Analysis

Level of education
Bachelor's level

Discipline type
Special (professional), Selective

Semester
8

Language of instruction
Ukrainian

Lecturers and course developers

Vladyslav Kolbasin

vladyslav.kolbasin@khpi.edu.ua
Senior teacher of the Department of Computer Mathematics and Data Analysis

Work experience - 15 years. Leading lecturer in the disciplines: "Object-oriented programming", "Computer geometry and graphics"

More about the lecturer on the website

General information

Summary

The discipline is aimed at mastering the theoretical and practical basics of using artificial neural networks. Considered both rather outdated methods and modern methods.

Course objectives and goals

The purpose of the discipline is to form ideas about the main problems, mathematical methods, models and some practical tools for using artificial neural networks.

Format of classes

Lectures, laboratory works, self-study, consultations. Final control in the form of an exam.

Competencies

GC 1. The ability to learn and master modern knowledge.
GC 2. Ability to apply knowledge in practical situations.
GC 3. The ability to generate new ideas (creativity).
GC 4. The ability to be critical and self-critical.
GC 6. Ability to abstract thinking, analysis and synthesis.
GC 7. Ability to search, process and analyze information from various sources.
GC 8. Knowledge and understanding of the subject area and understanding of professional activity.

GC 10. Skills in the use of information and communication technologies.
SC 1. Ability to use and adapt mathematical theories, methods and techniques for proving mathematical statements and theorems.
SC 2. Ability to perform tasks formulated in mathematical form.
SC 3. The ability to choose and apply mathematical methods for solving applied problems, modeling, analysis, design, management, forecasting, decision-making.
SC 5. Ability to develop algorithms and data structures, software tools and software documentation.
SC 7. The ability to solve professional tasks using computer equipment, computer networks and the Internet, in the environment of modern operating systems, using standard office applications.
SC 8. Ability to operate and maintain software of automated and information systems for various purposes.
SC 14. The ability to understand the statement of the task, formulated in the language of a certain subject area, to search and collect the necessary initial data.

Learning outcomes

LO 1. Demonstrate knowledge and understanding of basic concepts, principles, theories of applied mathematics and use them in practice.
LO 2. To have basic principles and methods of mathematical, complex and functional analysis, linear algebra and number theory, analytical geometry, theory of differential equations, in particular partial differential equations, theory of probabilities, mathematical statistics and random processes, numerical methods.
LO 8. Combine mathematical and computer modeling methods with informal procedures of expert analysis to find optimal solutions.
LO 10. To know the methods of choosing rational methods and algorithms for solving mathematical problems of optimization, operations research, optimal management and decision-making, data analysis.
LO 14. Demonstrate the ability to self-study and continue professional development.
LO 15. To be able to organize one's own activity and obtain a result within a limited time.
LO 24. To be able to apply existing and develop new algorithms and software tools for processing measurement and observation data, texts, signals and images.
LO 25. To be able to apply modern information technologies and software for processing large data sets based on distributed and cloud services.

Student workload

The total volume of the course is 120 hours (4 ECTS credits): lectures – 20 hours, laboratory classes – 20 hours, self-study – 80 hours.

Course prerequisites

"Machine learning methods and tools", "Optimization methods", "Computational geometry and computer graphics", "Neural network technologies".

Features of the course, teaching and learning methods, and technologies

Programming skills are required. Study materials are available to students on the teacher's website.

Program of the course

Topics of the lectures

Topic 1. Introduction to the subject. Basic concepts and ideas of deep learning. Basic concepts and elements of recurrent neural networks.
Topic 2. Mechanism of attention in recurrent networks.
Topic 3. Types, purposes, advantages and disadvantages of autoencoders (autoencoders). Variation autoencoders.
Topic 4. Generative adversarial networks (GAN).

Topic 5. Representation learning. Introduction to Meta-Learning, formulation and types of tasks (Domain Adaptation, Metric learning, Few-Shot Learning). Construction of Siamese neural networks. Contrastive loss.
Topic 6. Learning without a teacher (Unsupervised learning) in deep neural networks.
Topic 7. Self-attention mechanism. Transformer architecture for text processing tasks.
Topic 8. Methods of generating adversarial examples (adversarial attack).
Topic 9. Methods of visualization and interpretation of the work of neural networks.
Topic 10. Disentangled learning. Knowledge Distillation.

Topics of the laboratory classes

Topic 1. Construction of simpler recurrent neural networks.
Topic 2. Construction and use of the attention layer to improve the performance of recurrent neural networks
Topic 3. Construction of classic autoencoders and variational autoencoders.
Topic 4. Construction of Siamese neural networks.
Topic 5. Generation of adversarial examples.

Self-study

During self-stury, students study lecture material, prepare for tests, and exams.

Non-formal education

In non-formal education according to the relevant Regulation (http://surl.li/pxssv), the educational component or its individual topics can be taken into account in case of independent completion of professional courses/trainings, obtaining civic education, online education, professional internship, etc.

In particular, individual topics of this component may be taken into account upon successful completion of the following courses:

- Topics 1-2.
https://www.coursera.org/learn/nlp-sequence-models?specialization=deep-learning
- Topic 3. Types, purposes, advantages and disadvantages of autoencoders (autoencoders). Variation autoencoders.
https://www.coursera.org/projects/deep-learning-with-pytorch-build-an-autoencoder
- Topic 4. Generative adversarial networks (GAN). https://www.coursera.org/projects/deep-learning-with-pytorch-generative-adversarial-network
- Topic 5. Representation learning. Introduction to Meta-Learning, formulation and types of tasks (Domain Adaptation, Metric learning, Few-Shot Learning). Construction of Siamese neural networks. Contrastive loss.
https://www.coursera.org/projects/deep-learning-with-pytorch-siamese-network

Assessment and grading

Criteria for assessment of student performance, and the final score structure

A necessary condition for passing the test or exam is the completion of laboratory work.
30 points are awarded for writing control tests.
Passing laboratory tests - 70 points.

Grading scale

Total points	National	ECTS
90–100	Excellent	A
82–89	Good	B
75–81	Good	C
64–74	Satisfactory	D
60–63	Satisfactory	E
35–59	Unsatisfactory (requires additional learning)	FX
1–34	Unsatisfactory (requires repetition of the course)	F

Norms of academic integrity and course policy

The student must adhere to the Code of Ethics of Academic Relations and Integrity of NTU "KhPI": to demonstrate discipline, good manners, kindness, honesty, and responsibility. Conflict situations should be openly discussed in academic groups with a lecturer, and if it is impossible to resolve the conflict, they should be brought to the attention of the Institute's management.

Regulatory and legal documents related to the implementation of the principles of academic integrity at NTU "KhPI" are available on the website: http://blogs.kpi.kharkov.ua/v2/nv/akademichna-dobrochesnist/
